

HILLSBORO

New Aluminum Utility Trailer

Hillsboro's New Aluminum Utility Trailer is available in three deck widths, 54", 70" and 78". Lengths are offered in 8', 10', 12' and 14'. These rugged trailers are setting on a "Dexter" 3500 Class axle. Using an off brand axle under this new trailer just wouldn't be right!

No worries finding the right location to hook a securement strap. There are three securement locations at the front and every 12" on the sides. All units have a 16" deck height. The ramp is 48" long.

Like all other Hillsboro aluminum products, this new trailer is engineered with proprietary extrusions that enhance appearance, create advantages for customer use, safety and convenience.
